General:

Electron Guns, Three with Axes Tilted Toward Tube Axis.	Blue, Green, Red	
Heater, for Unipotential Cathode of Each Gun, Paralleled with Each of the Other Two Heaters within Tube: Current at 6.3 volts.	1.8	amp
Focusing Method	Electrostatic	
Convergence Method.	Magnetic	
Deflection Method	Magnetic	
Deflection Angles (Approx.): Horizontal.	70°	
Vertical.	55°	
Direct Interelectrode Capacitances (Approx.): Grid No.1 of any gun to all other electrodes.	10	$\mu\mu\text{f}$
Cathode of blue gun + cathode of green gun + cathode of red gun to all other electrodes.	16	$\mu\mu\text{f}$
Grid No.3 to all other electrodes	9	$\mu\mu\text{f}$
External Conductive Coating to ultor.	{ 2500 max. 2000 min.	{ $\mu\mu\text{f}$ $\mu\mu\text{f}$

Optical:

Faceplate, Spherical.	Filterglass
Light transmission (Approx.).	72%
Screen, on Inner Surface of Faceplate: Type.	Aluminized, Tricolor, Phosphor-Dot Phosphor (Three separate phosphors, collectively) ^a
Fluorescence and phosphorescence of separate phosphors, respectively.	P22—All-Sulfide Type Blue, Green, Red
Persistence of group phosphorescence.	Medium Short
Dot arrangement	Triangular group consisting of blue dot, green dot, and red dot
Spacing between centers of adjacent dot trios (Approx.).	0.029"

Mechanical:

Tube Dimensions: Overall length.	25-1/32" \pm 3/8"
Diameter.	20-13/16" \pm 1/8"
Screen Dimensions (Minimum): Greatest width.	19-1/4"
Height.	15-1/2"
Projected area.	261 sq. in.
Weight (Approx.).	36-1/2 lbs

Limiting Circuit Values:

High-Voltage Circuits:

In order to minimize the possibility of damage to the tube caused by a momentary internal arc, it is recommended that the *high-voltage power supply* and the *grid-No.3 power supply* be of the limited-energy type.

Grid-No.3 Circuit Resistance (Each gun) 7.5 max. megohms

Low-Voltage Circuits:

Effective Grid-No.1-to-Cathode-Circuit Resistance (Each gun). 0.75 max. megohm

The grid-No.2-to-heater circuit, the grid-No.1-to-heater circuit, and the cathode-to-heater circuit should each have an impedance such that their respective power sources in combination will not supply a continuous short-circuit current of more than 300 milliamperes total. Such current limitation will prevent heater burnout in case of a momentary internal arc within the tube.

^a For Curves, see front of this Section.

^b For maximum cathode life, it is recommended that the heater supply be regulated at 6.3 volts.

^c Brilliance and definition decrease with decreasing ultor voltage. In general, the ultor voltage should not be less than 20,000 volts.

^d Centering of the raster on the screen may be accomplished by passing direct current of the required value through each pair of deflecting coils. With all components properly adjusted, the raster centering correction is the distance from the undeflected focused beams to the center of the screen.

^e The equivalent raster movement is about $3/4''$.

^f Lateral converging magnet must shift the red beam and the green beam in opposite direction to the shift of the blue beam. Under conditions where the blue beam has been shifted $1/4''$, the shift of the red beam and green beam should be in the range of $1/8''$ to $3/8''$.

DEFINITIONS

Beam trio. The red beam, green beam, and blue beam passing through a common hole in the shadow mask.

Register. Exact correspondence in position of the centers of beam trios with respect to the centers of the associated phosphor-dot trios.

Misregister. Lack of correspondence in position of the centers of the beam trios with respect to the centers of the associated phosphor-dot trios.

Displacement. Shift of the position of the beams with respect to the phosphor dots.

GENERAL CONSIDERATIONS

X-Ray-Warning. Because this color picture tube is designed to be operated at ultor voltages as high as 27.5 kilovolts (Design-maximum value), shielding of this color picture tube for X-ray radiation may be needed to protect against possible injury from prolonged exposure at close range.

Shatter-Proof Cover Over the Tube Face. Following conventional picture-tube practice, it is recommended that the cabinet be provided with a shatter-proof, glass cover over the face of this color picture tube to protect it from being struck accidentally and to protect against possible damage resulting from tube implosion under some abnormal condition. This safety cover can also provide X-ray protection when required.

High Voltages. The high voltages at which cathode-ray tubes are operated may be very dangerous. Great care should be taken in the design of apparatus to prevent the operator from coming in contact with the high voltages. Precautions include the inclosing of high-potential terminals and the use of interlocking switches to break the primary circuit of the power supply when access to the equipment is required.

NOTE 1: WITH TUBE NECK INSERTED THROUGH FLARED END OF REFERENCE-LINE AND NECK-FUNNEL-CONTOUR GAUGE AND WITH TUBE SEATED IN GAUGE, THE REFERENCE LINE IS DETERMINED BY THE INTERSECTION OF THE PLANE CC' OF THE GAUGE WITH THE GLASS FUNNEL.

NOTE 2: SOCKET FOR THIS BASE SHOULD NOT BE RIGIDLY MOUNTED; IT SHOULD HAVE FLEXIBLE LEADS AND BE ALLOWED TO MOVE FREELY. BOTTOM CIRCUMFERENCE OF BASE SHELL WILL FALL WITHIN A CIRCLE CONCENTRIC WITH BULB AXIS AND HAVING A DIAMETER OF 3".

NOTE 3: THE DRAWING SHOWS THE MINIMUM SIZE AND LOCATION OF THE CONTACT BAND OF THE EXTERNAL CONDUCTIVE COATING. THE ACTUAL AREA OF THIS COATING WILL BE GREATER THAN THAT OF THE CONTACT BAND SO AS TO PROVIDE THE REQUIRED CAPACITANCE. EXTERNAL CONDUCTIVE COATING MUST BE GROUNDED.

NOTE 4: TO CLEAN THIS AREA, WIPE ONLY WITH SOFT DRY LINT-LESS CLOTH.

NOTE 5: THE MAXIMUM EFFECTIVE WIDTH OF A FUNNEL PAD IS 5/8".
