DESCRIPTION AND RATING

The 6BR8 is a miniature tube which contains a sharp-cutoff pentode and a medium- μ triode in one envelope. It is intended primarily for service as a combined triode oscillator and pentode mixer in VHF television tuners although the tube is also suitable for a wide variety of general-purpose applications in both monochrome and color television receivers. Except for basing arrangement and direct interelectrode capacitances, the 6BR8 is identical to the 6U8.

The 5BR8 is a 600-milliamperere version of the 6BR8 which differs only in heater ratings. The 5BR8 exhibits a controlled heater warm-up characteristic which makes it particularly suited for use in television receivers which employ 600-milliamperere series-connected heaters.

CHARACTERISTICS AND TYPICAL OPERATION

AVERAGE CHARACTERISTICS

	Pentode Section	Triode Section
Plate Voltage	250	150 Volts
Screen Voltage	110	... Volts
Cathode-Bias Resistor	68	56 Ohms
Amplification Factor	40
Plate Resistance, approximate	400000	5000 Ohms
Transconductance	5200	8500 Micromhos
Plate Current	10	18 Milliampers
Screen Current	3.5	... Milliampers
Grid-Number 1 Voltage, approximate $I_b = 10$ Microampers	-10	-12 Volts

* Heater warm-up time is defined as the time required in the circuit shown at the right for the voltage across the heater terminals (V) to increase from zero to the heater test voltage (V_1). For this type, $E = 18.7$ volts (RMS or DC), $V_1 = 3.73$ volts (RMS or DC), and $R = 23.5$ ohms.

† With external shield (RETMA 315) connected to cathode of section under test unless otherwise indicated.
